

Allowing law enforcement to easily monitor broadband and VoIP connections also provides for the easy ABUSE of this access. I don't know about whomever is reading this, but I, for one, STRONGLY DISAGREE with any act that could allow for somebody to read my private correspondence and/or conversations without my knowing. Also note that a true "bad guy" or terrorist could easily defeat this monitoring scheme via encryption. It's a bad idea. It's an easily defeated idea. Do everybody a favor and do away with it.
